This ditch outlets into the Little Portage just west of Muddy Creek North Road. It is backwater influenced and water sits for extended periods, up to and west of Mud Creek Road. This causes rapid sedimentation. Although the outlet is in marsh, from there up to Mud Creek Road has good access and CRP areas. West of Mud Creek Road no filter strips, over the edge farming and furrow drainage. Since thi sproject was recently excavated and put back to the original plan specs it needs at a six year review and base increase. Mow or brush spray in 2019.
